Paid pilot for software vendors

In three steps from your current database to EQLServer – with acceptance criteria you define.

Process

1 · Proof of concept – €500 service fee, under NDA

Companies only, requested via the form. One application with test data, no real customer data, runs on EQLServer in our environment. Result: a short report plus video or screenshots showing your application running on EQLServer, with the list of gaps and a proposal for the pilot scope and acceptance criteria. The service fee is fully credited on order.

2 · Pilot – fixed scope, acceptance criteria

We close the agreed gaps, migrate your data, install and support, and prove acceptance with your own test cases. Price: individual quote.

3 · OEM contract – non-exclusive

You ship EQLServer with your application. Price: individual quote, tiered by number of end-customer installations.

Deliverables

You deliver

- Your installed application (test installation with sample data)
- The manual or user guide
- Your own test cases

You receive

- Migration report: what runs, what was adapted, what is open
- Test log of your test cases on EQLServer

- Parallel operation: original database and EQLServer side by side until you switch

Optional: if we may name you as a reference after a successful pilot, this is a discount component. Without your approval we name you nowhere.
